## 🎯 Objective

Motivated software developer looking for an opportunity to apply my skills in developing RESTful APIs using system design concepts and building responsive applications for web, mobile, and desktop platforms. I am capable of deploying applications and enjoy automating systems and solving problems through coding. Seeking an opportunity to demonstrate my skills, contribute to real-world projects, and continuously learn and grow as a developer.

## 🎓 Education

|                                                       |             |
|-------------------------------------------------------|-------------|
| <b>Sri Vasavi Engineering College, Tadepalligudem</b> | 8.18 CGPA   |
| B.Tech                                                | 2024-2027   |
| <b>SIR C R REDDY POLYTECHNIC, Eluru</b>               | 73.3 %      |
| Diploma in Computer Science and Engineering           | 2021-2024   |
| <b>Z.P.H.S Kurellagudem</b>                           | 9.7 CGPA    |
| SSC                                                   | 2020 - 2021 |

## 📁 Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                |

| <b>National Institute of Technology Andhra Pradesh</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Tadepalligudem, Andhra Pradesh |
| Intern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | May 2026 – Present             |
| Developing <b>iMentor</b> , an offline first educational <b>AI chatbot</b> in <b>React Native</b> and Expo, powered by <b>ExecuTorch</b> for on device multimodal inference. Built a <b>document RAG pipeline</b> with local PDF parsing and a vision language model for captioning diagrams and charts, along with a local context pruning system to keep queries within model limits. Implemented a <b>dual mode LLM switcher</b> between online Groq inference and fully offline Llama 3.2 execution, along with offline voice dictation using Whisper and background sync to a Node.js and MongoDB backend once connectivity resumes. Earned <b>2 bounties</b> among all teams for feature contributions during the internship. |                                |
| <b>My Access Private Limited</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Bhimavaram-534201              |
| Trainee                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | November 2023 - April 2024     |
| Completed <b>Python Full Stack Development</b> training covering frontend, backend, and database fundamentals, and built a <b>Spam Email Detection</b> model using <b>Scikit-learn</b> , Pandas, and NumPy, earning a course completion certificate upon evaluation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                |

## <> Projects

### Number Guessing Game Full Stack Flask React

Built a full stack number guessing game with a Flask REST API using a layered resources, services, and models architecture, MongoDB storage, and JWT authentication. Implemented a scoring based leaderboard, a multi clue hint engine, and Google Gemini integration for AI powered hints, with a React and Vite frontend covering gameplay, history, and leaderboard.

### Jarvis

Built a Python based AI voice assistant with face authentication using OpenCV and Haar cascades, speech recognition, and hotword detection via Pyporcupine. Integrated Google Generative AI Gemini for context aware conversations with persistent chat history, and used Eel for a web based GUI. Implemented voice controlled automation including WhatsApp messaging, news fetching, Wikipedia search, and YouTube playback using PyAutoGUI and Selenium.

### Acne Pilot

Built a full stack acne assessment platform with a Node.js and Express REST API, MongoDB and Mongoose, and JWT authentication. Integrated a Flask based ML service using a VGG model to classify acne severity from images with confidence scores, and used Groq AI to generate daily treatment plans that adapt based on user feedback. Deployed across Render and HuggingFace Spaces using Docker.

### Akatsuki Report Intelligence Portal

Built a RESTful API in Spring Boot Java 21 with a layered Controller, Service, and Repository architecture, using Spring Security and JWT for stateless authentication and ownership based access control. Implemented CRUD endpoints for a review system with Spring Data JPA, Hibernate, and MySQL, integrated Jsoup for news scraping and Groq AI for headline rewriting, and containerized the app with Docker.
